EDUCATION

Bachelor of Science in Data Analytics

Expected Graduation: May 2027

Missouri State University | Springfield, MO | GPA: 3.93/4.0

- Relevant Coursework: Database Management, Applied Business Statistics, Data Mining, Machine Learning

PROJECTS & CERTIFICATIONS

Loan Default Prediction — America's Innovate IT Collegiate Conference (AITCC) Analyze IT Challenge | 2nd Place

March 2026

- Joined and cleaned three relational tables (70K borrowers, 180K loans, 627K payment records) in Python, handling missing values, duplicates, orphaned foreign keys, and inconsistent formatting to produce a single loan-level modeling dataset.
- Engineered payment behavior features from monthly repayment records including on-time rate, delinquency rate, and cumulative delinquent days. EDA showed these were far more predictive of default than traditional metrics like credit score and income.
- Trained dual-target models for default classification (AUC 0.96) and days-to-default regression (R^2 0.62) on evaluation data. Delivered a 12-slide visual report with risk monitoring recommendations.

Retail Sales SQL Analysis: Holiday & Promotional Impact

- Built an ETL pipeline with date parsing and NULL handling to produce a clean, joined dataset ready for analysis.
- Designed 3 reusable SQL views to separate data transformation from query logic, enabling 5 downstream analyses on store efficiency, holiday lift, and promotional markdown impact without repeated joins.
- Queried department-level sales ratios around Super Bowl week and found that holiday-driven revenue spikes were concentrated in specific departments rather than uniform across the store.

Automated Daily Operations Monitoring Pipeline

- Built an automated monitoring pipeline to convert raw operational data into daily KPIs and flag anomalies using a rolling 7 day baseline, improving visibility into daily operational performance.
- Orchestrated scheduled runs via n8n to automate KPI reporting into Google Sheets, achieved 100% automation of the data pipeline from raw ingestion to visualization, eliminating the need for manual data entry.
- Improved monitoring consistency by standardizing daily checks and enabling earlier detection of revenue drops and cancellation spikes, supporting faster and more proactive operational decision making.

IBM Data Analyst Professional Certificate

- Executed end to end analytical workflows using Python, SQL, Excel, AI assisted analysis, and data visualization tools to cleanse, interrogate, and synthesize real world datasets into dashboards and decision ready insights.

EXPERIENCE

Intern – Front Office Operations

Feb 2025 – Mar 2025

Bank of Chaoyang | Liaoning, China

- Identified a customer flow bottleneck through on site observation and frontline traffic monitoring, then recommended a queue redesign that streamlined lobby movement and reduced average wait times by 15% during peak hours.
- Managed and triaged 50+ daily customer requests in a high volume environment, evaluated request trends by category to reveal recurring demand patterns, and informed desk level staffing allocation to strengthen coverage during busy periods.
- Reviewed customer documentation and transaction records with close attention to detail, ensuring compliance with processing standards, minimizing downstream errors, and contributing to more consistent operational execution.

ORGANIZATIONS

Member

Association for Business Information Technology Students(A-BITS) | Missouri State University

Sep 2025 – Present

- Applied Python, RStudio, and data visualization techniques to analyze simulated business cases in weekly analytics workshops, strengthening end-to-end problem solving and team-based decision making.

SKILLS

- Technical: SQL, Python, R, ETL, Advanced Excel, Power BI, IBM Cognos Analytics, Tableau
- Analytical & Business: Data Cleaning, Data Validation, Data Wrangling, EDA, Statistical Analysis, Data Automation, Dashboard Development, Business Insights
